

## WHAT ARE MY CHANCES OF CATCHING AN STD?

- you have unprotected sex (without using a latex condom or if the condom breaks) with a person who may have an infection
- your partner has, or has had, a sexually transmitted infection
- you have a new sex partner

- your partner has sex with others
- you are a user of injection drugs, or your partner is
- you share needles for drugs, body piercing or tattoos, or your partner does.

*If you have taken chances such as having sex without using a latex*

*condom, please see a doctor or visit a public health clinic, and ask for an STD check-up. Your health is important and so is the health of your partner. Remember that STDs may not cause symptoms.*

If you have any questions or problems about STDs, contact your local CLSC
